Veeam ONE

Monitoring & Analytics for Virtual and Veeam-protected Cloud and Physical Workloads

Today, with the growth of data exploding, it's difficult to keep track of all the systems it touches, especially with data spread across virtual, physical, hybrid and public cloud environments. How do you keep track of all the systems your data resides on and transports through? How do you ensure everything is running at peak performance, and how can you remediate data issues faster?

Veeam ONE delivers deep, intelligent monitoring, reporting, and automation through interactive tools and intelligent learning, identifying and resolving real customer problems before they become major issues. Veeam remains focused on delivering key capabilities that ensure organizations like yours get complete visibility into your backup infrastructure and the operational aspects of your backup and recovery processes.

Veeam® ONE™, a part of the Veeam Availability Suite™ provides a comprehensive monitoring and analytics solution for backup, virtual and physical environments, providing support for Veeam Backup & Replication™ and Veeam Agents, as well as VMware, Hyper-V and Nutanix AHV. It delivers deep, intelligent monitoring, reporting and automation through interactive tools and intelligent learning, identifying and resolving real customer problems before they begin.

Clear, unified visibility and control

Veeam ONE provides comprehensive monitoring and analytics for your entire IT environment

Veeam ONE delivers feature-rich monitoring and analytics to provide the clear visibility you need:

- **Built-in Intelligence:** Identify and resolve common infrastructure and software misconfigurations before operational impact.

- **Governance & Compliance:** Organizations know their data protection posture instantly through consistent monitoring and reporting on backup SLA compliance

- **Intelligent Automation:** Machine Learning-based diagnostics as well as remediation actions to resolve issues faster.

- **Forecasting and planning:** Visibility into the costs of compute, storage and backup repository resources to forecast utilization rates and resource requirements.

What's New in Veeam ONE v11:

- Monitoring, alerting and reporting for continuous data protection (CDP)

- Monitoring, alerting, and reporting for Veeam Agent *for Mac*

- ~~Visibility into Google Cloud Platform backup operations for increased control, reduced complexity and compliance readiness~~

- Ransomware awareness and visibility into immutability status of your backups.

What customers say about Veeam ONE:

"Being able to monitor everything at once is a huge advantage. Veeam alerts us to issues that we can resolve before they escalate into problems and impact the business. Reporting is another big advantage. Veeam's reports help with capacity planning as Welch's requirements change and the business grows."

Welch's

Veeam is an Elite VMware Technology Alliance Partner and a charter member of the VMware Ready Management program.

Gold
Microsoft Partner

Veeam is a Microsoft Gold Certified Partner with competencies in ISV, and Management and Virtualization.

Veeam ONE has been by VMware as VMware Ready.

Key capabilities of Veeam ONE

24.7 real-time monitoring and alerts

Stay alert and mitigate potential issues before they become threats to your environment with 340+ preset alarms, over 150 pre-built reports and Heatmaps that help you maintain visibility into the resource utilization of your backup infrastructure.

Veeam Intelligent Diagnostics

Minimize downtime and the time spent on calls with proactive issue resolutions to common backup infrastructure problems. Veeam proactively identifies known issues within your environment, alerting you with self-support reconfigurations and hotfixes.

Business View

Improve performance and visibility for virtual and agent-based infrastructures by creating business groups based on business unit, geography, department, and more. You can even leverage VMware tags based on CPU, memory and location.

Agent Monitoring and Reporting

Reduce the complexities of managing physical and cloud computer backups. Monitor Veeam backup agents through alarms and job states overviews, warnings and failures, and determine if agents are protected or unprotected.

Seamless user experience

Veeam ONE provides both a local and web-based client providing simplified navigation, one-click access to deployment projects, product configuration and extended customization options to tailor monitoring, reporting and analytics specific to your business needs.

Remediation Actions

Reduce downtime risks and eliminate manual responses to alarms by setting automated, self-healing, policy-based fixes for common backup and infrastructure-related problems that trigger automatic changes or approvals of action.

Chargeback and billing

Save time and reduce planning complexities by calculating the cost of compute and storage resource consumption by department/customer, and then bill accordingly.
Monitoring and reporting for Veeam CDP

Veeam ONE includes data protection monitoring, reporting and alerts for continuous data protection (CDP), which allows you to catch any issues that impact the protection of your mission-critical workloads.

Capacity Planning

Easily forecast resource usage and utilization trends for VMware, Hyper-V and backup environments to stop guessing and accurately determine when resources will run out.

Plus much more, including:

- Backup compliance reporting
- Raw data analysis and report customizations
- Report Builder
- Multi-tenant reporting and monitoring
- Performance and configuration assessments
- Infrastructure assessment reports

How to buy Veeam ONE

Veeam ONE can be purchased as part of Veeam Availability Suite, which combines the market-leading backup, replication and recovery features of Veeam Backup Replication with the deep monitoring, reporting and analytics of Veeam ONE, creating THE enterprise solution for backup, recovery and monitoring.
